**Aim:** Google Cloud Platform and SQL integration.

**1.** After creating a google cloud platform engine create a new project.

**Cloud SQL instances**

Cloud SQL instances are fully managed, relational MySQL, PostgreSQL and SQL Server databases. Google handles replication, patch management and database management to ensure availability and performance. [Learn more](#)

To get started with Cloud SQL, you can create a new instance or use Database Migration Service to migrate your SQL database to Google Cloud.

[CREATE INSTANCE](#) [MIGRATE DATA](#)

#### Choose your database engine

##### MySQL

Versions: 8.0, 5.7, 5.6

[Choose MySQL](#)

##### PostgreSQL

Versions: 14, 13, 12, 11, 10, 9.6

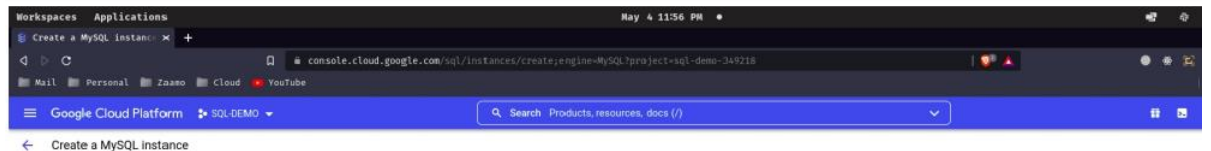

[Choose PostgreSQL](#)

##### SQL Server

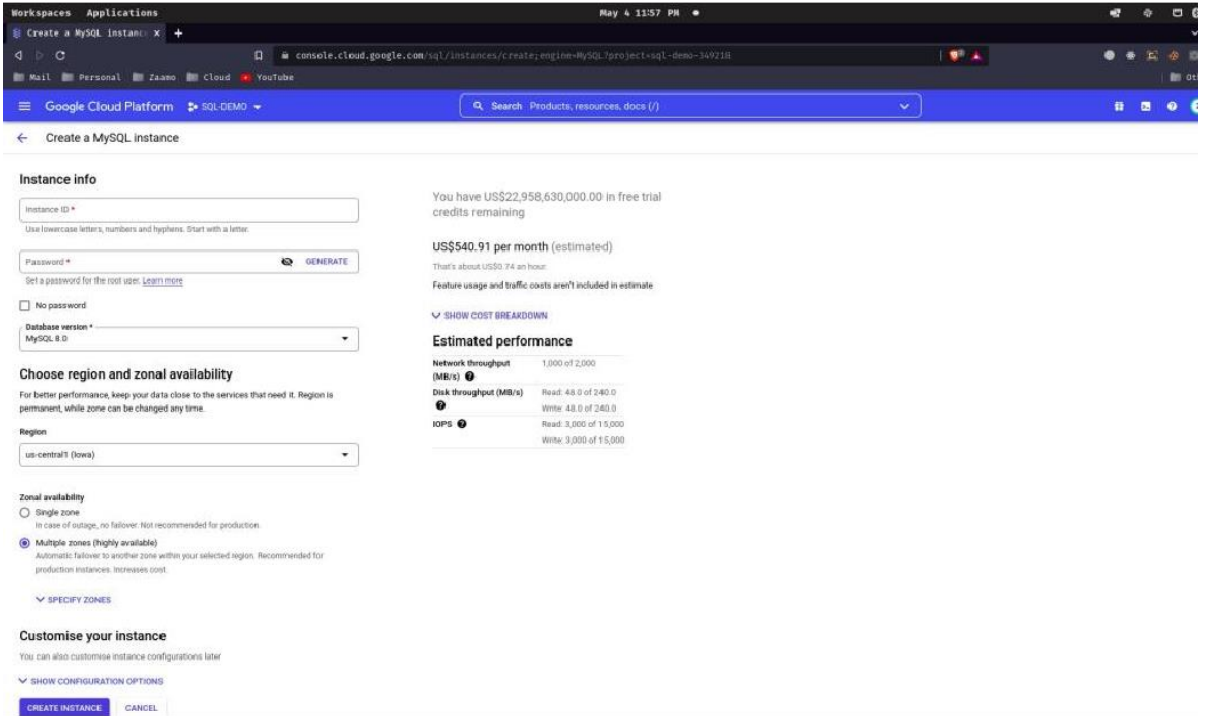

Versions: 2019, 2017

[Choose SQL Server](#)

Want more context on the Cloud SQL database engines? [Learn more](#)

**i** In order to create an instance, you have to enable the Compute Engine API first. [Learn more](#)

### Instance info

Instance ID \*

sqldemo

Use lowercase letters, numbers and hyphens. Start with a letter.

Password \*

\*\*\*\*\*

GENERATE

Set a password for the root user. [Learn more](#)

☐ No password

Database version \*

MySQL 8.0

### Choose region and zonal availability

For better performance, keep your data close to the services that need it. Region is permanent, while zone can be changed any time.

Region

us-central1 (Iowa)

#### Zonal availability

☐ Single zone

In case of outage, no failover. Not recommended for production.

☒ Multiple zones (highly available)

Automatic failover to another zone within your selected region. Recommended for production instances. Increases cost.

[SPECIFY ZONES](#)

### Customise your instance

You can also customise instance configurations later

[SHOW CONFIGURATION OPTIONS](#)

CREATE INSTANCE

CANCEL

You have US\$22,958,630,000.00 in free trial credits remaining

US\$540.91 per month (estimated)

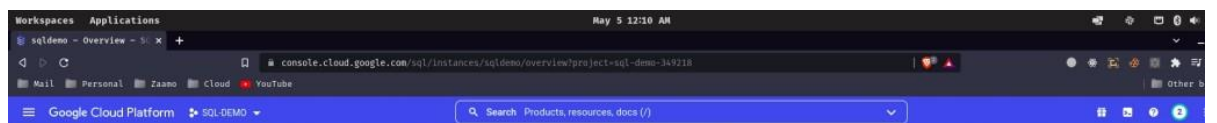

That's about US\$0.74 an hour

Feature usage and traffic costs aren't included in estimate

[SHOW COST BREAKDOWN](#)

### Estimated performance

Network throughput (MB/s)	1,000 of 2,000
Disk throughput (MB/s)	Read: 48.0 of 240.0 Write: 48.0 of 240.0
IOPS	Read: 3,000 of 15,000 Write: 3,000 of 15,000

Installing the gcloud CLI

This page contains instructions for choosing and maintaining a Google Cloud CLI installation. The Google Cloud CLI includes the `gcloud`, `gsutil` and `bq` command-line tools. For a list of gcloud CLI features, see [All features](#).

To access the Google Cloud APIs using a supported programming language, you can download the [Cloud Client Libraries](#).

Installation instructions

These instructions are for installing the Google Cloud CLI. For information about installing additional components, such as gcloud CLI commands at the alpha or beta release level, see [Managing gcloud CLI components](#).

★ **Note:** If you are behind a proxy/firewall, see the [proxy settings](#) page for more information on installation.

Linux

Debian/Ubuntu

Red Hat/Fedora/CentOS

macOS

Windows

★ **Note:** Depending on your setup, you can choose other installation methods:

- If you want `gcloud` and `gsutil` to automatically update to the latest version and you're running a modern Ubuntu release that uses the Snap Package Manager, you can install the Google Cloud CLI as a `snap` package.
- If you're using an instance on Compute Engine, the gcloud CLI is installed by default.

Package contents

The gcloud CLI is available in package format for installation on Debian and Ubuntu systems. This package contains the `gcloud`, `gsutil`, `alpha`, `gcloud beta`, `gsutil` and `bq` commands only. It doesn't include

(base) beastmaster65@menace:~\$ gcloud init

Welcome! This command will take you through the configuration of gcloud.

Your current configuration has been set to: [default]

You can skip diagnostics next time by using the following flag:

gcloud init --skip-diagnostics

Network diagnostic detects and fixes local network connection issues.

Checking network connection...done.

Reachability Check passed.

Network diagnostic passed (1/1 checks passed).

You must log in to continue. Would you like to log in (Y/n)?

Filter

gcloud CLI

Product overview

gcloud CLI overview

gcloud CLI cheat sheet

Quickstart

Install the Google Cloud CLI

How-to guides

All how-to guides

- Installing the gcloud CLI
- Setting up the gcloud CLI
- Managing gcloud CLI components
- Scripting gcloud CLI commands
- Enabling accessibility features
- Using gcloud interactive shell
- Uninstalling the gcloud CLI

## You are now authenticated with the gcloud CLI!

Send feedback

The authentication flow has completed successfully. You may close this window, or check out the resources below.

### Information about command-line tools and client libraries

To learn more about Google Cloud CLI commands, see the [gcloud CLI guide](#).

To learn more about the command-line tools for App Engine, Compute Engine, Cloud Storage, BigQuery, Cloud SQL, and Cloud DNS (which are all bundled with the gcloud CLI), see [Accessing services with the gcloud CLI](#).

If you're a client application developer and want to find out more about accessing Google Cloud services with a programming language or framework, see [Client Libraries Explained](#).

### Tutorials

Here are some links to help you get started with Google Cloud services:

- Build and deploy a web service to Cloud Run.**  
To get started, follow the [walkthrough in Cloud Shell Editor](#).
- Launch large compute clusters on Compute Engine.**  
To get started, follow a [Compute Engine quickstart](#).
- Store vast amounts of data on Cloud Storage.**  
To get started, follow the [gutil tool quickstart](#).

[47] asia-northeast2-a
[48] asia-northeast2-b
[49] asia-northeast2-c
[50] asia-northeast3-a
did not print [45] options.
Too many options [95]. Enter "list" at prompt to print choices fully.
Please enter numeric choice or text value (must exactly match list item): 26

Your project default Compute Engine zone has been set to [asia-east1-b].
You can change it by running [gcloud config set compute/zone NAME].

Your project default Compute Engine region has been set to [asia-east1].
You can change it by running [gcloud config set compute/region NAME].

Created a default .boto configuration file at [/home/beastmaster65/.boto]. See this file and
[https://cloud.google.com/storage/docs/gsutil/commands/config] for more
information about configuring Google Cloud Storage.
Your Google Cloud SDK is configured and ready to use!

* Commands that require authentication will use vrishabhsk@gmail.com by default
* Commands will reference project 'sql-demo-349218' by default
* Compute Engine commands will use region 'asia-east1' by default
* Compute Engine commands will use zone 'asia-east1-b' by default

Run 'gcloud help config' to learn how to change individual settings

This gcloud configuration is called [default]. You can create additional configurations if you work with multiple accounts and/or projects.
Run 'gcloud topic configurations' to learn more.

Some things to try next:

* Run 'gcloud --help' to see the Cloud Platform services you can interact with. And run 'gcloud help COMMAND' to get help on any gcloud command.
* Run 'gcloud topic --help' to learn about advanced features of the SDK like arg files and output formatting
* Run 'gcloud cheat-sheet' to see a roster of go-to 'gcloud' commands.
